

What is Azure?

Azure is a fully flexible cloud platform with more than 200 products and cloud services designed to help you build, deploy, run, and manage applications across multiple clouds, on-premises, and at the edge, with the tools and frameworks of your choice. Currently, 95% of Fortune 500 companies use Azure resources for their cloud computing and infrastructure.

With Azure, we're ready to help you deliver for your customers, whether that's lift and shift, hybrid cloud, multi-cloud, or any combination. Building on the long legacy of Microsoft, Azure is a powerful platform for technology in service of business.

Scalability on Demand

Easily adapt to the ever-changing circumstances of your business with flexible features. You get a competitive advantage right from the get-go, as you still benefit from the same application performance regardless of the user influx and without having to worry about underutilized on-premises solutions.

Cost Efficiency

slash costs, increase agility, and operate more strategically by moving on-premises infrastructure to the cloud.

Azure allows you to access more resources as and when you need them. This means you won't need to spend money on additional hardware and IT maintenance. Including servers configured to your exact specifications, so you will always have plenty of server capacity.

90+ compliance offerings

Take advantage of more than 90 compliance certifications, specific to global regions and get more than 35 compliance offerings specific to the needs of key industries, including health, government, finance, education, manufacturing, and media.

Defend your data

Azure secures your data at rest and in transit with state-of-the-art encryption using various encryption methods, protocols, and algorithms, including double encryption.

Benefit from a team of more than 3,500 global cybersecurity experts that work together to help safeguard your business assets and data in Azure.

Backup + Disaster Recovery

With over 50 world-class compliance certifications and 99 years of retention. It offers single click backup support for SQL database and virtual machines. In the event of service disruption or data loss, Microsoft Azure can recover your data 66% quicker than an on-premises IT solution.

Trust your cloud

Get security from the ground up - backed by a team of experts, and proactive compliance trusted by enterprises, governments, and startups.

Security is foundational for Azure. Take advantage of multi-layered security provided across physical datacenters, infrastructure, and operations with cyber security experts actively monitoring to protect your business assets and data.
