CLEANVOICE

USE YOUR PHONE SYSTEM ANYWHERE!

Simple, Flexible, and Cost Effective

VoIP is the future of voice communications for businesses.

Flexible Business Communication

Take your office phone anywhere.

Voice over IP (VoIP) uses your LAN to transmit data, and doesn't require extra phone lines to be run through your office and its flexibility doesn't end in the office...

Your phone can go with you wherever you need to go, as long as you have a broadband connection or are connected to Wi-Fi hot, which means your customers and employees can stay in touch anywhere you are, by calling your company's business phone.

Don't have access to your business phone? No Problem! Even if you don't have your business phone with you, you can also send and receive calls directly from your computer or by downloading an app on your mobile phone.

Many VoIP numbers can also be configured to ring simultaneously on multiple devices, such as your mobile phone and your landline phone, before the call goes to voicemail eliminating the time-consuming practice of "phone tag." In a recent survey conducted by Sage Research, employee productivity was increased by 4 hours per week, per employee from the use of Voice over IP technology.

Cost Effectiveness

Save money compared to traditional phone bills.

With CleanVoice VoIP, your phone data is sent over the Internet and not over traditional phone lines (although it can be received over traditional phone lines), eliminating the need for costly local phone plans as well as long distance services.

CleanVoice provides you with quality a phone system and includes all the typical phone features without requiring investments into expensive hardware.

You no longer need to purchase or lease costly hardware or wait for wiring to be installed. VoIP helps companies to avoid those stressful moments spent reviewing monthly telephone bills filled with erratic and unpredictable charges and maintenance costs are also included in your contracted monthly service, thereby decreasing the operating costs associated with traditional phone systems.
